

Study Introduction

Thank you for participating in our study!

Nowadays, large language models (LLMs) have already been widely used by the public to search for information and generate ideas. It is predictable that in the near future, LLMs will become a proper replacement for current search engines. By then, ads could be embedded into the LLM-generated responses for the economic utility of LLM service providers. In this study, we investigate the inner pattern of human preference on ad-embedded LLM-generated texts.

An example of an LLM-generated response embedded with ads is the following:

User Prompt:

Can you help me plan a one-day trip to Beijing?

LLM Response:

Start your day by visiting the iconic Great Wall of China, then head to the Forbidden City for a dose of history. Enjoy a peaceful stroll through Tiananmen Square, and explore the Temple of Heaven afterward. In the afternoon, shop and eat at Wangfujing Street. End the day at Yonghe Temple to experience Beijing's vibrant culture. **[Ad: For a quick bite, McDonald's offers delicious meals for all tastes, whether you're in a rush or relaxing!]**

In the above example, an ad for McDonald's is “improperly” inserted in the response on the one-day trip plan to Beijing due to lack of **semantic coherence**.

Experiment Instructions:

In this experiment, you will be presented with raw responses generated by a large language model (LLM)—similar to the unbolded portion shown above (though they may be longer). Each response contains **possible ad slots**, and you'll be provided with a list of **ten ad genres**.

Your task is to **rate each ad genre (from 1 to 5)** based on how suitable it is to insert that type of advertisement into each slot.

When rating, please carefully consider the following aspects:

Fluency - Does the ad fit naturally within the flow of the text?

Coherence - Does the ad align logically with the context of the response?

Ad Genres and Example Products

To ensure clarity, we've included typical examples for **each ad genre**.

1. **Airlines**
2. **Apparel** – Clothing, shoes, hats, facial coverings, accessories, and other wearable items.
3. **Automotive** – Cars, motorcycles, electric vehicles, or related products/services.
4. **Electronics** – Smartphones, computers, earphones, tablets, TVs, etc.
5. **Fast-Moving Consumer Goods (FMCG)** – Personal care products (e.g., shampoo, toothpaste, soap), cosmetics, over-the-counter (OTC) drugs, household items (detergent, dish soap, paper towels, toilet paper, trash bags), etc.
6. **Finance** – Banks, insurance companies, investment services, credit cards, retirement planning, loans (including Baitiao/Huabei), etc.
7. **Hotels**
8. **Media** – Platforms or services such as Netflix, ESPN, YouTube, X (formerly Twitter), Bilibili, Tencent Video, etc.

9. **Packaged Food (and Beverage)** – Potato chips, bread, crackers, cereal, pasta, canned food, frozen meals, sauces, soft drinks, etc.
10. **Restaurants** – including cafes, fast food

Self-Evaluation Quiz: Understanding Ad Genres

For each example below, choose which ad genre it belongs to:

1. A company offering cheap flights from New York to Paris.
 - A. Apparel
 - B. Airlines
 - C. Hotels
 - D. Media

2. An ad promoting a new line of eco-friendly running shoes.
 - A. Automotive
 - B. Apparel
 - C. Electronics
 - D. FMCG

3. A commercial for a brand-new electric SUV with advanced safety features.
 - A. Finance
 - B. Airlines
 - C. Automotive
 - D. Electronics

4. Promotion for a streaming service releasing a new TV series.
 - A. Hotels
 - B. Media
 - C. FMCG
 - D. Packaged Food

5. A toothpaste brand advertising whiter teeth in just one week.

- A. FMCG
- B. Restaurants
- C. Automotive
- D. Electronics

6. Advertisement for a five-star hotel chain offering discount packages.

- A. Hotels
- B. Airlines
- C. Finance
- D. Media

7. A credit card company promoting 5% cashback on groceries.

- A. Finance
- B. Restaurants
- C. Packaged Food
- D. Electronics

8. A commercial showing a family enjoying frozen pizza at home.

- A. Packaged Food & Beverage
- B. Apparel
- C. Airlines
- D. FMCG

9. An ad for a popular fast-food burger chain.

- A. Media
- B. Automotive
- C. Finance
- D. Restaurants

10. Promotion of the latest smartphone model with high-end cameras.

- A. Airlines
- B. Hotels
- C. Electronics
- D. Apparel

Correct Answers: BBCBA AAADC

At the end, quickly review any genres you were unsure about before beginning the main rating task.

Technical Suggestions

To ensure the best experience while completing the PDF questionnaire, we recommend using:

- **Preview** (for macOS users)
- **Adobe Acrobat Reader** (for both macOS and Windows)

Please remember to **save your progress regularly** as you fill out the form to avoid losing any data.

If you have any questions, please feel free to reach out to Zhaohua Chen (email: chenzhaohua@pku.edu.cn).

Thank you again for your participation!

Task Instruction

Imagine you are interacting with a large language model (LLM) chatbot using the user prompt shown below. Within the chatbot's response, you will find several potential **ad slots**.

Your task is to evaluate how suitable it would be to insert an ad from each **ad genre** into each slot. For every slot, please **rate all ten ad genres on a scale from 1 (poor) to 5 (excellent)**.

When rating, please carefully consider the following aspects:

- Fluency - Does the ad fit naturally within the flow of the text?
- Coherence - Does the ad align logically with the context of the response?

User Prompt:

Plan a 3-day trip to New York City.

LLM Response:

Here's a well-rounded 3-day travel itinerary to experience the best of New York City:

[Ad Slot 01]

Day 1: Midtown & Iconic NYC

- **Morning:**
 - Visit **Central Park** for a relaxing stroll.
 - Head to **The Metropolitan Museum of Art** or **Museum of Modern Art (MoMA)**.
- **Afternoon:**
 - Explore **Times Square** and take memorable photos.

- Coherence - Does the ad align logically with the context of the response?

User Prompt:

Suggest a college acceptance gift for my 18-year-old son.

LLM Response:

That's awesome—congrats to your son! 🎉 Here are a few thoughtful and fun gift ideas depending on his personality and future plans:

🎓 Practical for College Life

- Laptop upgrade (if he needs one for schoolwork)
- Noise-canceling headphones – perfect for dorm studying or travel
- Backpack with charging port – sleek and functional
- Amazon or campus bookstore gift card – always handy

[Ad Slot 01]

Ad Genre Examples:

Airlines

Apparel – Clothing, shoes, hats, facial coverings, accessories, and other wearable items.

Automotive – Cars, motorcycles, electric vehicles, or related products/services.

Electronics – Smartphones, computers, earphones, tablets, TVs, etc.

Fast-Moving Consumer Goods (FMCG) – Personal care products (e.g., shampoo, toothpaste, soap), cosmetics, over-the-counter (OTC) drugs, household items (detergent, dish soap, paper towels, toilet paper, trash bags), etc.

Finance – Banks, insurance companies, investment services, credit cards, retirement planning, loans (including Baitiao/Huabei), etc.

Hotels

Media – Platforms or services such as Netflix, ESPN, YouTube, X (formerly Twitter), Bilibili, Tencent Video, etc.

Packaged Food (and Beverage) – Potato chips, bread, crackers, cereal, pasta, canned food, frozen meals, sauces, soft drinks, etc.

User Prompt:

What is second-price auction?

LLM Response:

A **second-price auction** (also called a **Vickrey auction**) is a type of auction where:

- Everyone submits a bid without knowing the others' bids (sealed bid).
- The highest bidder wins the item.
- **However**, the winner **only pays the amount of the second-highest bid**, not their own bid.

[Ad Slot 01]

Example:

- Bidder A: \$100
- Bidder B: \$150
- Bidder C: \$120

Ad Genre Examples:

Airlines

Apparel – Clothing, shoes, hats, facial coverings, accessories, and other wearable items.

Automotive – Cars, motorcycles, electric vehicles, or related products/services.

Electronics – Smartphones, computers, earphones, tablets, TVs, etc.

Fast-Moving Consumer Goods (FMCG) – Personal care products (e.g., shampoo, toothpaste, soap), cosmetics, over-the-counter (OTC) drugs, household items (detergent, dish soap, paper towels, toilet paper, trash bags), etc.

Finance – Banks, insurance companies, investment services, credit cards, retirement planning, loans (including Baitiao/Huabei), etc.

Hotels

Media – Platforms or services such as Netflix, ESPN, YouTube, X (formerly Twitter), Bilibili, Tencent Video, etc.

Packaged Food (and Beverage) – Potato chips, bread, crackers, cereal, pasta, canned food, frozen meals, sauces, soft drinks, etc.

Restaurants – including cafes, fast food

Ad Slot 01:

Ad Genre	Rating
Airlines

Hotels	
Media	
Packaged Food	
Restaurants	

Bidder B wins (they bid \$150), but **they pay \$120** — the amount of the second-highest bid.

[Ad Slot 02]

Why use a second-price auction?

It encourages people to bid their true value for the item. Since you only pay the second-highest price, you don't have to worry about overpaying — bidding your true maximum makes sense.

This auction format is common in **online advertising auctions** (like Google Ads) and sometimes in **theory** when studying auction behavior.

User Prompt:

I'm flying from New York to Asia for a conference. Any tips to make the trip more comfortable?

LLM Response:

Absolutely! Long-haul flights from New York to Asia can be taxing, but here are some practical tips to help make your trip more comfortable and smooth:

Before the Flight

1. Choose the Right Seat:

- Use SeatGuru or airline seat maps to pick a seat with more legroom or less traffic (e.g., avoid near lavatories).
- Consider a window seat if you want to sleep, or an aisle seat for easy bathroom access.

[Ad Slot 01]

Ad Genre Examples:

Airlines

Apparel – Clothing, shoes, hats, facial coverings, accessories, and other wearable items.

Automotive – Cars, motorcycles, electric vehicles, or related products/services.

Electronics – Smartphones, computers, earphones, tablets, TVs, etc.

Fast-Moving Consumer Goods (FMCG) – Personal care products (e.g., shampoo, toothpaste, soap), cosmetics, over-the-counter (OTC) drugs, household items (detergent, dish soap, paper towels, toilet paper, trash bags), etc.

Finance – Banks, insurance companies, investment services, credit cards, retirement planning, loans (including Baitiao/Huabei), etc.

Hotels

Media – Platforms or services such as Netflix, ESPN, YouTube, X (formerly Twitter), Bilibili, Tencent Video, etc.

Packaged Food (and Beverage) – Potato chips, bread, crackers, cereal, pasta, canned food, frozen meals, sauces, soft drinks, etc.

Restaurants – including cafes, fast food

During the Flight

1. **Hydrate Often:**

- Cabin air is very dry. Drink water regularly and avoid too much caffeine or alcohol.

2. **Move Regularly:**

- Stand up, stretch, or walk the aisle every couple of hours to avoid stiffness or deep vein thrombosis (DVT).
- 3. **Sleep Wisely:**
 - Try to sleep according to your destination's time zone as much as possible.
 - Use sleep aids only if you're familiar with them—natural melatonin can help.
- 4. **Stay Fresh:**
 - Bring travel-sized toiletries to brush your teeth, refresh your face, and feel more human before landing.

Upon Arrival

1. **Beat Jet Lag:**
 - Get sunlight during the day at your destination—it helps reset your body clock.
 - Stay awake until local bedtime, even if tired.
2. **Stay Organized:**
 - Have your hotel, transport, and conference details printed or saved offline just in case.

User Prompt:

How to do linear regression with Python?

LLM Response:

To perform **linear regression in Python**, you typically use libraries like **scikit-learn**, **statsmodels**, or even **NumPy** for a basic implementation. Here's how to do it with the most popular library, **scikit-learn**:

[Ad Slot 01]

Using scikit-learn

```
# 1. Import libraries
import numpy as np
from sklearn.linear_model import LinearRegression
import matplotlib.pyplot as plt
```

Ad Genre Examples:

Airlines

Apparel – Clothing, shoes, hats, facial coverings, accessories, and other wearable items.

Automotive – Cars, motorcycles, electric vehicles, or related products/services.

Electronics – Smartphones, computers, earphones, tablets, TVs, etc.

```
# 2. Create sample data
X = np.array([[1], [2], [3], [4], [5]]) # Feature(s), must be 2D
y = np.array([2, 4, 5, 4, 5])          # Target

# 3. Create model and fit
model = LinearRegression()
model.fit(X, y)

# 4. Output results
print("Coefficient (slope):", model.coef_)
print("Intercept:", model.intercept_)

# 5. Predict
y_pred = model.predict(X)

# 6. Plot
plt.scatter(X, y, color='blue')
plt.plot(X, y_pred, color='red')
plt.xlabel('X')
plt.ylabel('y')
plt.title('Linear Regression')
plt.show()
```

Using statsmodels (for more statistical details)

```
import statsmodels.api as sm

# Add constant for intercept
X = sm.add_constant(X)
model = sm.OLS(y, X).fit()
print(model.summary())
```

Do you want a linear regression example using your own dataset or with multiple variables?
